

Metro C construction site at Roman Forum, Rome - 16th June 2017

Discovering monitoring systems in one of the most beautiful archaeological sites in the world

Field Trip on geotechnical and structural monitoring

The Field Trip is addressed to people who deal with field surveys, structural monitoring, architectural heritage protection, and in particular Geologists, Engineers, and Architects. It will be possible to closely observe the structural and geotechnical works at the Basilica of Maxentius and Temple of Venus and Roma.

Schedule

- 9.00 am: meeting in front of the metro B station "Colosseo";
- 9.30 am: walk along Via dei Fori Imperiali;
- 10:15 am: entrance into the archaeological area, and visit to the main monitoring system installations;
- 12.30 pm: conclusion of the visit.
